

EUROPEAN REACH REGULATION (EC) 1907/2006 (AS AMENDED) DECLARATION

Hydraulic Projects Ltd is not a manufacturer or importer of substances as defined in the REACH directive and therefore has no responsibilities for registration of substances.

Hydraulic Projects Ltd is classed as a 'Downstream User' of materials including, paint, thinners, lubricants and metal alloys, all of which are purchased within the EC and used as intended by the suppliers.

Hydraulic Projects Ltd manufactures hydraulic valves and pumps and is therefore a producer of 'articles' which are exempt from registration because they do not contain substances that are designed to be intentionally released during use.

Hydraulic Projects Ltd confirm, to the best of its knowledge, that none of its products or packaging contain any of the Substances Of Very High Concern (SVHC) **on the REACH Candidate List dated January 2021 (211 substances)** in a concentration above the 0.1% by weight allowable limit.

Hydraulic Projects Ltd have contacted all its suppliers, reminding them of their duties under REACH to inform us if any materials they supply contain SVHCs either now or in the future. Hydraulic Projects Ltd under-take to pass on any such notification received to its customers.
